

Guidelines for CAN Newsletter authors

Preamble

- (1) Editors of the CAN Newsletter prefer technical features or application reports that are not product-specific. The CAN Newsletter uses North American English spelling.
- (2) Editors welcome articles on
 - (a) new technologies,
 - (b) research results,
 - (c) application examples,
 - (d) and unique products (first on the market).

§ 1

[Format requirements]

- (1) Unformatted text (.doc, .rtf, .txt)
- (2) Short headline suggestion to the point
- (3) Figures with 300-dpi (dot per inch) resolution separately
- (4) Figures captions listed at the end of the article, referring to the figure number
- (5) Product news up to 2000 letters
- (6) Application, technology, and research articles up to 9000 letters

§ 2

[Editorial requirements]

- (1) All content must be technically correct and relevant.
- (2) The article must not advertise a product or service.
- (3) Authors may mention specific products to make a point. Multiple usage of product and company names will be replaced by generic names (e.g. the device).
- (4) Arguments and the article overall should be structured to simplify reading.
- (5) Get straight to the point. Abstain from introductions (e.g. it is well-known that...) without any relevant information. Keep it short unless it's of major importance (to the reader, not to the author).
- (6) Grammar, language, and SI units must be correct. Abbreviations must be explained. Do not use jargon. Other than some CAN knowledge, do not assume readers have prior knowledge of your topic.
- (7) All articles will be edited according to these criteria. The editors will not change the content of your argument but may shorten it and apply the above principles.
