

CiA 447 – SIG special car add-on devices 2022-10-12

CAN in Automation organizes a CiA 447 meeting. The intention is to review the existing specifications and to set the work plan for further development.

The meeting will give overview about the existing solution for taxi, blue-light vehicles e.g. police cars, and vehicles for people with special needs.

International standardization in regard to telematics and firefighting trucks references the CiA 447 specification and may have additional requirements.

Police forces are having strong requirements in regard to cybersecurity due to their nature as part of the critical infrastructure. It is intended to in cooperate those into the specification series.

Date, time, and location
